PROADAPT celebrates 5 years of working to mobilize private sector for climate resilience. The ambition of PROADAPT was to support the development of new and innovative methodologies, tools, and business models to help small companies in Latin America and the Caribbean increase their own climate resilience and to seize related business opportunities. We are proud to share with you some of the highlight projects from our first 5 years.

PROADAPT is implementing a project in Belize to help increase private sector climate resilience through technical assistance, capacity building, and knowledge sharing. This project aims to develop a climate-smart water management system that can adapt to changing climatic conditions and support the resilience of local communities. PROADAPT is partnering with Global Climate Adaptation Partnership (GCAP) to carry out a study on Private Markets for Climate Resilience in the Caribbean.

In the framework of the first AdaptAmericas conference, held on 15-16 May 2018 in Panama, a panel discussion on how to integrate gender considerations into climate resilience projects as well as outlining some innovative ideas for women and climate change. Luis Marquez presented the PROADAPT Climate Change and Gender Assessment Tool. The Tool provides guidance on how to integrate gender considerations into climate resilience projects as well as outlining some innovative ideas for women and climate change. The Tool is available for download on the PROADAPT website.

PROADAPT/Global Climate Adaptation Partnership (GCAP) are implementing a project in Colombia to help increase private sector climate resilience through technical assistance, capacity building, and knowledge sharing. This project aims to develop a climate-smart agriculture system that can adapt to changing climatic conditions and support the resilience of local communities. PROADAPT is partnering with Global Climate Adaptation Partnership (GCAP) to carry out a study on Private Markets for Climate Resilience in the Caribbean.

PROADAPT is partnering with Global Climate Adaptation Partnership (GCAP) on a 3-continent, 6-country, 2-sector study on Private Markets for Climate Resilience. The study aims to identify climate resilience-enhancing products and services provided by the private sector across the globe. National teams across 6 countries contributed to the study, which identified various opportunities for private sector engagement in climate resilience, including in the fishery and eco-tourism sectors. The study also provided recommendations for how to enhance private sector involvement in climate resilience.

ADAPTAmericas 2018 - Panama took place on 15-16 May 2018 in Panama. The conference aimed to bring together policymakers, stakeholders, and experts to discuss the role of the private sector in climate resilience and adaptation. The conference featured panel discussions, workshops, and networking opportunities, providing a platform for professionals to share knowledge and experiences on how to engage with entrepreneurs and businesses who are seeking to integrate climate resilience into their operations. The conference also provided an opportunity for impact investors to engage with entrepreneurs and businesses who are seeking to integrate climate resilience into their operations.

Read the blog post by Lee West from WCIF on the Woman and Climate Impact Fund, which will provide a new source for climate finance and investments with gender lens and big data. The blog post discusses the importance of integrating gender considerations into climate resilience projects and outlines some innovative ideas for women and climate change. The blog post is available for download on the PROADAPT website.
